Equipment Status Tagging Systems

Making Latest Status Visible

Scafftag® empowers people to make informed decisions by making information:

- ✓ Instantly visible
- ✓ Shared
- ✓ Available where it is needed most

Think about any item of equipment on your site.

- ✓ How do you know if equipment is safe to use or know what maintenance has been carried out?
- ✓ How do you identify it among the hundreds of similar items of equipment on site?

Without accurate, up to date and timely information, people are prone to make assumptions. And assumptions can lead to potentially damaging decisions for both them and your business performance. Tracking the identity, usage, safety, maintenance and inspection status of each and every item of equipment is therefore critical.

In 1983, Scafftag® introduced the innovative visible status tagging system for scaffolding and the name Scafftag® has since become synonymous with scaffold inspection tagging. But we can help you with tags and inspections management for much more than scaffolding, from ladders and lifting equipment to fire extinguishers and lockout Tagout, for manufacturing, to processing, to utilities and construction. In fact, whatever your equipment - we can tag it.

Over 30 Years of Industry Experience

Scafftag® has unrivalled experience of safety, maintenance and asset management. Through our industry experience we are able to provide the necessary expertise and proven track record to successfully implement equipment status tagging systems and suit to your unique business processes.

Scafftag - Our range of systems

Visual Tagging Systems - Holder and Insert Systems

Most status tagging systems have two components - a holder which attaches permanently to the equipment, and replaceable inserts. This creates a simple looped process for latest status and a clear data trail.

This ensures you have a permanent data trail of inspections and work carried out, as well as evidence in a court of law if you need it.

01 Empty holder displays: DO NOT USE

02 Equipment is inspected periodically, insert completed and placed in holder

03 If equipment should not be used, remove insert

Lockout Tagout - Solutions for hazardous energy control

Lockout Tagout is a planned safety procedure which involves turning off the energy supply of industrial machinery and equipment whilst maintenance work or repairs are being carried out. This procedure protects workers from the risks posed by live machinery or electricity.

Request our Lockout Tagout catalogue:

E: customer.services@scafftag.com

T: 0845 089 40 60

Pipemarking

Unmarked pipes are a danger to both life and property. Accidents, injuries and damage to equipment can be caused by people not knowing what individual pipes contain.

By correctly identifying pipes, errors can be prevented. Over 300 different standard substances that are available in several sizes and layouts. This standard range covers the most frequently used industrial substances. In the unlikely event that your particular needs are not fulfilled in this range, don't worry; Scafftag® will customise markers to your personal requirements.

Request our Pipemarking catalogue:

E: customer.services@scafftag.com

T: 0845 089 40 60

Inspection Record Books

Contain step by step guidance on legislation, risk assessment and inspection checklists for specific equipment or issues.

They provide all the documents required for your own inspection management system and use carbon copy paper, so all relevant parties can keep separate copies and share the same information.

Packaged in conveniently sized, easy to carry protective binders, offering protection against the weather and wear and tear for simple on site inspections and permanent record storage.

Training Tools

Help improve awareness on site of equipment safety and maintenance issues and support the implementation of our systems.

Plan. Inspect. Report.

Making Latest Status Visible

Safetrak® is the revolutionary electronic system that brings Equipment Status Management to your desktop.

Keep on top of all your different:

- ✓ Safety inspections
- ✓ Maintenance work
- ✓ Asset identification and location

Safetrak® is an electronic management tool that shares information on equipment and controls workflow for onsite employees and managers.

Safetrak® uses three components:

Electronically chipped Scafftag tagging systems

Rugged tags use either, long life RFID (Radio Frequency Identification) or barcode technology.

Handheld computers

Built to withstand industrial working conditions, including intrinsically safe models.

Specially designed software

Readymade modules are available for most equipment applications plus it can be customised to meet your own requirements and work practices.

Safetrak® allows efficient monitoring and evaluation of information in a simple and organised process. It combines visual identification with the speed and information benefits of computerised recording. This facilitates standardisation of best working practice and company wide reporting for records and audits.

"With the use of Safetrak we have seen reductions in project operating costs of up to 20%"

Some of our valued clients:

Plan

Work is planned for assets on the Safetrak® PC either automatically or manually.

Work orders are then downloaded to operator's handheld computers.

01

Execute

Each asset is uniquely identified with a tag.

Handheld computer guides the operator through the work order, providing the location of each asset to perform a task on.

Once a specific asset is scanned, the system directs the operator through a series of questions and instructions collecting data accurately.

02

Record, report & review

Upload records from handhelds.

Compile and review timely and accurate reports from the Safetrak® system.

03

> Customisation

Customise Your Solution

The entire range of Scafftag® status tagging systems and Safetrak® can be custom designed to help you manage virtually any issue and fit seamlessly with your business and systems.

Our team of experts will work with you to your specific business requirements. We are then able to:

- ✓ Adapt an existing system to incorporate your branding and unique business characteristics
- ✓ Provide a solution for the equipment/issues for which you require a system

Unrivalled, limitless customisation options

A wide range of customisation options are available including:

- ✓ Status tagging system size and shape (see Technical specification page on 6 for our standard holders)
- ✓ Data to be displayed / recorded
- ✓ Visual design including logo, colours and fonts to reflect corporate branding
- ✓ Adapted to site requirements. e.g. Metal strips for magnetic detection in food plants
- ✓ Various attachment methods. e.g. cable tie; screw; ring; rivet; magnetic; adhesive; metal/plastic strip;

Popular Custom Designs

Unique Solutions

A library of ideas

We have literally thousands of designs developed for other clients offering unique solutions which may be of interest to your business. So whatever your issue, contact us for a no-obligation solution.

Cost effective customisation

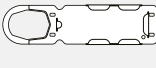

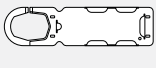

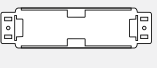

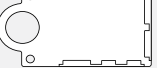

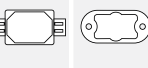

Scafftag® does not charge any consultancy fees for working with you to develop your customised design. All you pay is a one off artwork set up charge with your first order.

You can then reorder paying the price of the standard insert and holders used for your solution.

Status Tagging Systems Specification Sheets

Only Scafftag® offers such a broad range of holders to suit different designs to cover a number of applications. With Scafftag®, you can customise your own system using any holder in the range, plus your own tailor made inserts (see page 5)

Strops are available in nylon, stainless steel or plastic coated wire, with the optional lengths of 6 inch and 9 inch. (12 inch strops available in nylon only.)

An extremely robust permanent locking holder and insert system to help ensure security in terms of attachment. Plastic coated wire, stainless steel or nylon covered galvanized wire strops are available in differing lengths to suit your attachment requirements.

Unitag® uses our unique holder and insert system to ensure the latest status is instantly visible at the point of use.

A choice of different coloured inserts are available for Unitag® providing the option of additional visual qualification.

Suitable for:

- ✓ Valves identification... see page 78
- ✓ Lifting Equipment.... see page 13

Push both ends of the Unitag® together through the strop loops, locking it permanently in place.

Keep your tags attached

Unitag® is an extremely robust permanent locking holder and insert system to help ensure security in terms of attachment. For attachment Unitag® comes with plastic nylon or plastic coated wire strops as standard. If a more durable attachment is required, stainless steel strops can be added as an option.

For more information please call Scafftag® Customer Services on 0845 089 40 60 or email customer.services@scafftag.com

Forklifts

Legal Requirements

Employers have a duty to ensure that all employees, or other persons who may be operating or working in an area where forklift trucks are in operation, are adequately informed of the hazards and workplace requirements. This should include;

- ✓ A unique identification mark or tag and have a Rated Capacity Plate that informs the operator of the weight that the truck will lift, the Load Centre and the Stacking Height (Maximum Elevation of the Forks - this will be provided with the machine by the manufacturer)
- ✓ A system of identifying when safe to use and when not to be used.

The forklifts should be checked prior to use / pre-shift by an operator for damage, faults and wear.

Inspections at periods defined by manufacturers guidelines by a "competent person" - known as a "comprehensive inspection"

➤ Forklift Tagging System Design Changes

What is a Forkliftag?

Forkliftag® is a complete status tagging system to help control pre-shift inspections, maintenance and identification of forklift trucks. Forkliftag® uses our unique holder and insert system to ensure the latest status is instantly visible at the point of use. The standard insert contains an easy-to-follow pre-use operator checklist on the front and the facility to record up to 42 inspections on the reverse.

NEW DESIGN

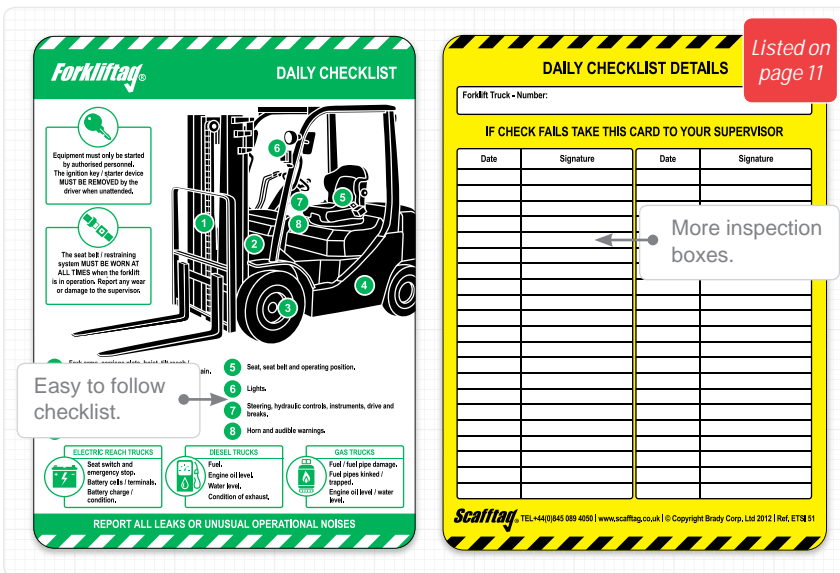

The old Forkliftag® insert

The new Forkliftag® insert

Machine Defect Report is only available in the Forkliftag® Daily Inspection Booklet.

The Insert

Listed on page 11

An Insert that's Simple to Use

- ✓ More inspection check boxes – 42 instead of 32
- ✓ New easy to follow daily checklist format
- ✓ Waterproof - made from polypropylene
- ✓ Sign and date your inspection checks with any type of pen.

Exclusive to the Forkliftag® Booklet

- ✓ Record up to 252 daily forklift inspections. Approx. 6 months worth
- ✓ Contains Machine Defect Report.

The dimensions of the Forkliftag® inserts haven't changed and are compatible with the original Forkliftag® holder.

➤ The New Forkliftag® Daily Inspection Booklet

NEW

The Forkliftag® Inspection Booklet contains 6 pages of daily inspection boxes (252 in total) and is an adaption of the standard insert designed to help control pre-shift inspections, maintenance and identification of forklift trucks and designed to operate alongside the Forkliftag® holder. Also includes machine defect report. Write and record inserts with any type of pen. The inspection booklet fits the standard Forkliftag® holder.

Contains up to 252 (6 months) of daily inspection checks. Sign and date your inspection checks with any type of pen. Fits in the standard Forkliftag® holders.

SAFETRAK® - INSPECTION AND REPORTING

Safetrak® simplifies your inspections and reporting processes allowing you to:

- **MANAGE SAFETY** inspections, maintenance work, asset identification and location
- **COMPLY WITH LEGISLATION** by providing a clear, visible and audit able trail of inspections, endorsements, recommendations and actions
- **GENERATE REPORTS** for equipment that has passed, failed, due inspection, been commissioned and decommissioned by date
- **TRACK AND CONTROL** the inspection, maintenance and service procedures and identify assets and location
- **INCREASE ACCURACY:** Use mobile computers to guide and record inspections using automatic identification technologies such as RFID and barcode to ensure the correct checks for each specific type of equipment are carried out every time
- **ELIMINATE PAPER REPORTING** and substantially reduce administration
- **SHARE UP-TO-DATE INFORMATION:** Plan with your personnel, both out in the field and back in the office.

Request a Safetrak® demo which can be personalised to your specific on-site requirements, and includes:

- Live system walk through
- Handheld computer operation
- Planning work orders
- Reporting features
- Relevant examples and case studies of other companies using the system
- A review of your current processes
- Identification of where the Safetrak® system can help improve efficiencies and reliability.

To request your demo of Safetrak® contact us on:

Telephone: **0845 089 40 60**

Lifting Equipment

Legal Requirements

Lifting equipment is defined by the Lifting Operations and Lifting Equipment Regulations 1998 (LOLER) as any equipment used at work for lifting or lowering loads, including attachments used for anchoring, fixing or supporting it.

The Regulations cover a wide range of equipment including, cranes, forklift trucks, lifts, hoists, Mobile Elevated Work Platforms (MEWPs), and vehicle inspection platform hoists. The definition also includes lifting accessories such as harnesses, chains, slings, and eyebolts etc.

However, **the focus of this guidance is upon industrial load lifting equipment such as hoists and slings.**

The Lifting Operations and Lifting Equipment Regulations 1998 (LOLER) require that a risk assessment must be completed prior to the start of any work and that lifting operations are planned, supervised and carried out in a safe manner by people who are competent.

The Regulations require that all lifting equipment is:

- ✓ Sufficiently strong, stable and suitable for proposed use. The load and anything attached (e.g. pallets, lifting points) must be suitable
- ✓ Positioned or installed to prevent the risk of injury e.g. from the equipment or the load falling or striking people
- ✓ Clearly marked with appropriate information to be taken into account for its safe use e.g. safe working loads, last / next inspection dates and results etc. Accessories such as slings, clamps etc, should be similarly marked
- ✓ Where appropriate, thoroughly examined before it is used for the first time. Lifting equipment will need to be inspected while in use at periods specified in the Regulations (at least six-monthly for accessories and equipment used for lifting people and, at a minimum, annually for all other equipment) or at intervals laid down in an examination schedule set by a competent person.

Anchor Devices

Anchor devices should be visually and manually inspected by a competent person before each use in accordance with the manufacturer's instructions and comprehensively examined at least once every 12 months.

Anchor devices that are not in regular use are not to be used unless they have undergone a comprehensive inspection in the previous 12 months.

Each anchor point should be labeled clearly showing the inspection date and anchor points intended use.

All examination work should be performed by a competent person; and following a thorough examination or inspection, a report is submitted by the competent person to the employer to take the appropriate action.

Futureproofed Nanotag's with RFID

What is RFID?

Radio Frequency Identification (RFID) is an automatic identification system which utilizes radio waves to transfer a unique ID from a storage medium to a device configured to read it. RFID does not require physical contact between the reader and the storage medium for data transfer to occur, the signal is also able to pass through different objects dependent on their physical properties i.e. low frequency radio waves are more effective in environments where there is a lot of metal present.

RFID systems are ideal for on-site asset tracking in industrial environments where traditional barcode technology is vulnerable to deterioration and damage from dust, water, oil, grease and other environmental factors.

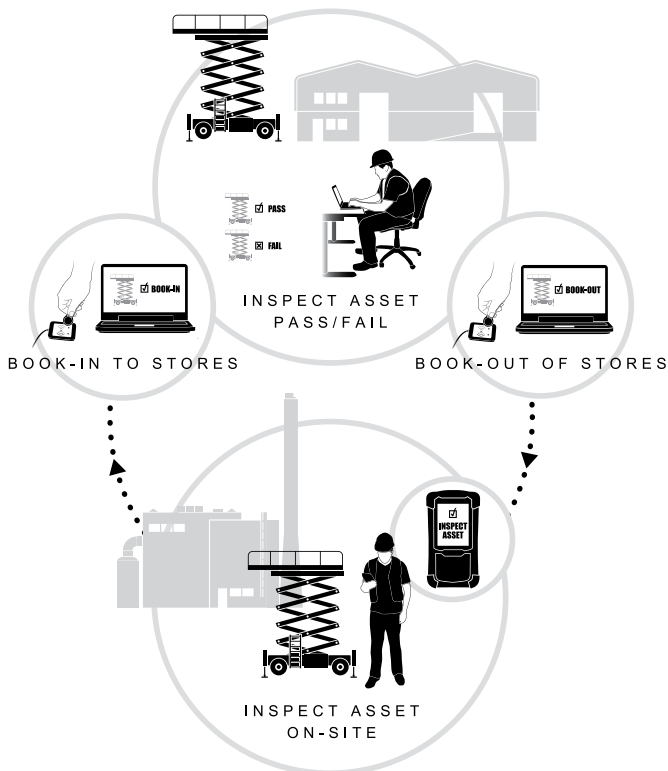

All Nanotag holder's sold by Scafftag® have RFID technology as standard.

The new Nanotag holder is manufactured from durable nylon and has a low frequency RFID chip embedded within as standard making it impervious to dust, oil and water etc. The 20mm low frequency RFID chip operates in the 125Khz range which makes it ideal for use in industrial environments where a lot of metal objects are present. (13.56Mhz version available on request dependent on quantity)

The attachment slots running through the middle of the holders have been enlarged by 1mm to accommodate stainless steel cable ties.

Check in and out with Safetrak®

Managing and controlling who has been assigned each piece of equipment can often provide an administrative headache. With so many assets and users, knowing the location, ownership, class, type and inspection status are just some of the difficulties faced. Utilising RFID tags to identify assets and electronic booking systems to manage them is an efficient way of improving asset tracking.

Using Safetrak® booking software on a computer in the stores, allows you to book in/out equipment and assign to a particular user electronically. The procedure provides the operator with the ability to record the equipment location and can optionally guide the operator through inspection checks before equipment is assigned out to the field.

When the equipment is returned to stores it is scanned to show the user has returned it, and post use checks are recorded

Key features of the Safetrak® booking system are:

- ✓ Includes dates and time stamps for each transaction
- ✓ Increases employee accountability
- ✓ Accurate tracking which eliminates the cost of replacing missing assets.

Safetrak

MEWP & LOLER

MEWP - Legal Requirements

The Work at Height Regulations 2005 state that employers must check that 'equipment for work at height is properly inspected and maintained'. Equipment used for lifting people such as MEWPs (Mobile Elevating Work Platforms), cherry pickers, booms and scissor lifts must be marked accordingly and safe for such a purpose. A pre-work inspection should be carried out daily before each use of the equipment and this recorded.

The MEWP Tag system uses a unique holder and insert system to ensure the latest status is instantly visible at the point of use. The tagging system includes an easy-to-follow pre-use operator checklist on the front and the facility to record up to 32 inspections on the reverse helping to fulfil the pre-use check requirements of the Work at Height regulations.

LOLER - Legal Requirements

The Lifting Operations and Lifting Equipment Regulations 1998 (LOLER) covers any equipment used at work for lifting or lowering loads, including attachments used for anchoring, fixing or supporting it.

The LOLER Regulations require an employer or self-employed person to ensure that all lifting equipment:

- ✓ Is visibly marked with any appropriate information to be taken into account for its safe use, e.g. safe working loads.
- ✓ Accessories such as slings, clamps etc, should be similarly marked.

LOLER legislation requires daily and weekly checks of equipment and a thorough examination which is to be recorded every 6 and 12 months and where the lifting equipment depends on the installation, it must be thoroughly examined:

- ✓ After installation, and before first use
- ✓ After assembly but before first use on a site or in a new location
- ✓ When equipment is hired out, it has to be accompanied by physical evidence of the last examination report.

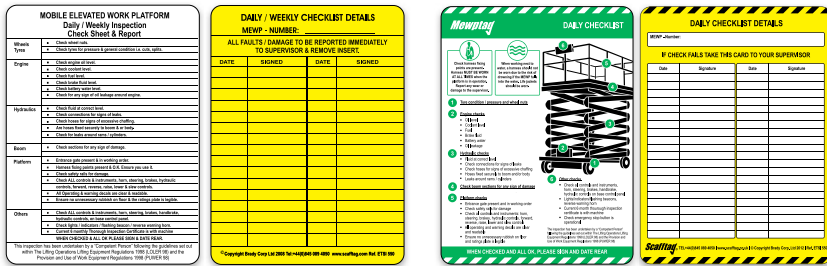

LOLER Tag is a specifically designed status tagging system for all equipment covered under the UK Lifting Operations Regulations (LOLER) 1998.

MEWP Tagging System Design Changes

What is a MEWP Tag?

Purpose designed status tagging system to help control frequent inspections, maintenance and identification of MEWPs (Mobile Elevating Work Platforms). MEWP Tag uses our unique holder and insert system to ensure the latest status is instantly visible at the point of use. The insert contains an easy-to-follow pre-use operator checklist on the front and the facility to record up to 42 inspections on the reverse.

The old MEWP Tag insert

The new MEWP Tag insert

The Holder

Listed on page 21

Specifications

- ✓ **TEMPERATURE TOLERANCE:** -5°C to +65°C
- ✓ **MATERIAL:** ABS
- ✓ **DIMENSIONS:** 285mm x 151mm
- ✓ **ATTACHMENT OPTIONS:** Hung, cable tie, magnetic strip, adhesive strip.

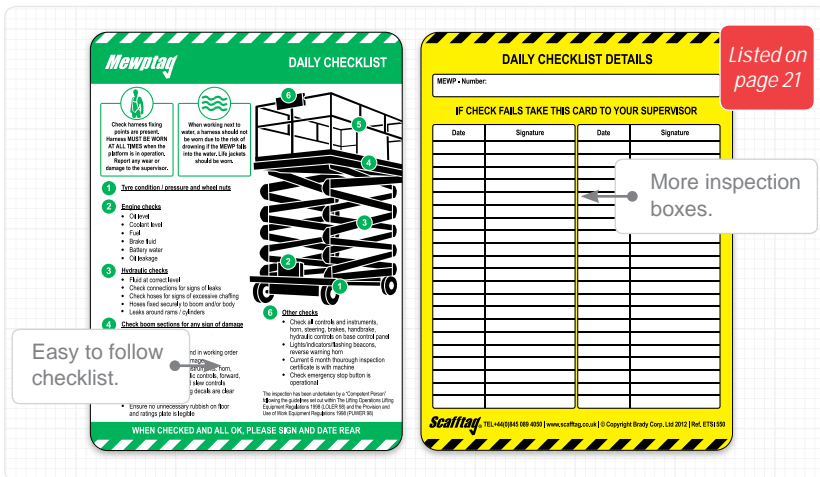

MEWP Tag with RFID

The MEWP Tag holder is available with an RFID chip attached.

NEW DESIGN

MEWP Tag Standard Inserts

Code	Description
ETSI 550	Standard MEWP inserts

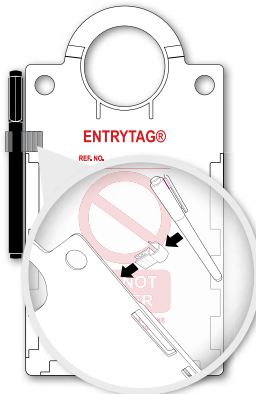

i How it works...

Stage 1: Holder should be attached permanently to the equipment via cable ties, adhesive, screw or rivet. For maximum visual effect, it is recommended that this is as near to the operator cabin access point as possible.

Stage 2: Back of the replaceable inserts contains a pre-use checklist for operators specifically relating to MEWP components. First operator for each day or for the week runs through each check step by step. If all checks are passed the operator then signs and dates the reverse of the insert and places in holder.

Stage 3: If any checks are failed the insert should be removed to instantly display 'Do Not Use' symbol and the operator should notify their supervisor.

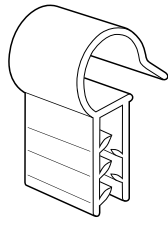

Pen Clip Holder

The Scafftag® pen clip attaches to the side of the holder to ensure you always have a suitable pen at hand while completing your inspection and maintenance checks.

The pen clip holder is unobtrusive (13mm width) and suitable for attachment to any Scafftag® holders.

The Edding® 141 F pen supplied as standard with Scafftag® tagging system is the correct diameter for this clip.

LOLER Tag inspection tag inserts designed to work in conjunction with our LOLER tag holders for all equipment inspections covered under the UK Lifting Operations Regulations (LOLER) 1998.

LOLER Tag Inserts

Code	Description
EITL 445	Lolertag Inserts

i How it works...

Stage 1: Holder is attached permanently to the equipment via cable ties, adhesive, screw or rivet. For maximum visual effect, it is recommended that this is as near to the operator cabin access point as possible.

Stage 2: The LOLER Tag inserts should be completed in conjunction with the permit to work issued for the job and inserted into the holder to indicate that the equipment is fit for use. The inserts provide a space for the equipment number, safe working load, a signature box and next inspection date.

Stage 3: If any checks are failed the insert should be removed to instantly display 'Do Not Use' and the operator should notify their supervisor.

> Good Practice

Good practice for MEWPs and other working platforms

It is a requirement that **all** working platforms (this includes scaffolding, MEWPs, cradles, trestles, podiums, steps and stairways etc) be:

- ✓ Located on a stable and suitably strong surface
- ✓ Of suitable strength and rigidity for the purpose
- ✓ Prevented from slipping by attachment to another structure (e.g. by an anti-slip device)
- ✓ Capable of being erected and dismantled safely, without the risk of components becoming displaced and endangering others
- ✓ Remain stable while being altered or modified
- ✓ In the case of wheeled structures be prevented from moving during work at height.

All such types of equipment should be inspected before use to ensure that:

- ✓ There are no loose or worn sections
- ✓ No surfaces such as non slip treads or rung finishes are ripped, torn or present a trip hazard
- ✓ Any wheel or foot locks designed to prevent the equipment moving when in use, work correctly

- ✓ Any locks to ensure that support legs or handrails are secured are in place and working correctly
- ✓ The working platform (if applicable) is sufficiently large to provide a safe working area for the task in hand.

Machinery

> Machinery Tagging System Design Changes

What is a Multitag?

Scafftag® offers machinery inspection tagging systems to be used as a visual system increasing safety and effectiveness of communication throughout the workplace by ensuring employees can be aware of machinery statuses, risks and warnings.

Electrical Equipment

Legal Requirements

To meet the requirements of the Electricity at Work Act 1989 it is necessary to implement a programme of planned inspection and testing of portable appliances. All systems should be maintained so far as is reasonably practical as to prevent any dangers identified.

Updates to the regulations in 1998 place requirements on every employer to ensure that the result of an inspection made is recorded and kept until the next inspection.

Nanotag™ and Microtag® are the most popular status tagging systems for portable appliance testing (PAT) and identification, allowing maximum visibility on equipment with minimal attachment space. They replace existing self adhesive label options which are prone to damage and failure in tough industrial environments. Microtag® and Nanotag™ use our unique holder and insert system to ensure the latest status is instantly visible at the point of use.

A choice of different colour inserts provides the option of additional visual qualification.

Customise your solution

Remember, with Scafftag® you can totally customise your solution or any other tagging system to reflect your unique issues, branding, work processes and operating environment.

See page 5 for more details.

Vibration Control

Legal Requirements

The Control of Vibration at Work Regulations 2005, state that employers must implement a programme of measures to minimise exposure to vibration based on a risk assessment. This includes setting "exposure limit values" for Hand Arm Vibration (HAV). In addition, they will have to provide information, instruction and training on vibration and health surveillance for employees exposed to vibration.

Microtag® provides latest vibration exposure data available at the point of use.

Scafftag® provide a range of tagging systems designed specifically to help manage exposure to Hand Arm Vibration Syndrome (HAVS). Microtag® is a purpose designed inspection tag system to help manage vibration monitoring and exposure to Hand Arm Vibration Syndrome (HAVS).

The Microtag® system has proven so successful that OCA (Offshore Contractors Association) prescribe it as the industry best practice for equipment subject to HAVS. The OCA's advice was in turn supported by UKOOA (United Kingdom Offshore Operators Association).

- ✓ MTI 405 insert indicates noise levels as well as vibration.
- ✓ MTI 451 insert incorporates the alternative new points per hour system under the regulations.

> Hand Arm Vibration Tag

HAVs vibration inspection tag holders designed to help manage exposure to Hand Arm Vibration Syndrome (HAVS).

Microtag® for HAVS

Code	Description
MIC-PK-405-B	Box of 20 Microtag® holders, 20 inserts, 1 pen

Microtag® for HAVS

Code	Description
MIC-PK-451-B	Box of 20 Microtag® holders, 20 inserts, 1 pen

How it works...

Stage 1: Attach holder permanently to equipment so that "Do Not Use equipment" is clearly displayed.

Stage 2: Select an appropriate insert and complete the reference or identity number to match the holder. Inserts are available in a range of scripts and colours.

- MTI 405 insert indicates noise level as well as vibration.
- MTI 451 insert incorporates the alternative points per hour system under the regulations.

The points per hour system helps users to keep track of levels of exposure accumulated over the whole day (especially important when using a variety of tools and equipment) to keep within the maximum safe level of vibration.

Stage 3: On satisfactory completion of the applicable test or inspection, insert the next test date and place insert in holder.

> Hand Arm Vibration Tag Holders

HAVs vibration inspection tag holders designed to help manage exposure to Hand Arm Vibration Syndrome (HAVS).

Racking Inspection Tag Holders

Racking & shelving inspection tag holders designed to operate alongside our Racktag inserts to clearly display latest inspection, maintenance and identification data at the point of use.

How it works...

Stage 1: Holder is permanently attached to equipment in a prominent position displaying Do Not Use.

Stage 2: Statutory inspection is carried out before use by authorised operators and recorded on insert.

Stage 3: If equipment fails inspection, insert is removed and handed over to appointed individual. The 'Do Not Use' symbol is instantly displayed.

Stage 4: If passes inspection, competent person completes green insert (OTSI 5). Frequent and competent person inspections are recorded on the insert.

Stage 5: If at any point, intermediate work is required, replace green insert with orange insert.

OTSI 6	Racktag - Pallet Racking Amber Inspection Inserts.

Fire & Emergency

Legal Requirements

Accidents involving fires thankfully do not arise too often. However, imagine the impact if vital equipment such as extinguishers and fire doors failed when such an event strikes.

Scafftag® provide an extensive range of solutions to help ensure that the latest inspection results of essential equipment such as these are clearly detailed at the point of use, offering increased peace of mind in the event of an emergency. A choice of different colour inserts provides the option of additional visual qualification.

> Fire & Emergency Tagging Systems

Inspection tagging system for fire extinguishers to clearly display latest safety, maintenance and identification information at the point of use.

Nanotag™ for Fire & Emergency

Code	Description
NAN-PK-GPI	20 Nanotag™ holders, 20 inserts, 1 pen
NAN-PK-GPI-B	Blue Insert
NAN-PK-GPI-G	Green Insert
NAN-PK-GPI-O	Orange Insert
NAN-PK-GPI-P	Purple Insert
NAN-PK-GPI-R	Red Insert
NAN-PK-GPI-W	White Insert
NAN-PK-GPI-Y	Yellow Insert

i How it works...

Stage 1: The holder is fixed onto the extinguisher on a non-intrusive part to prominently display the 'Do Not Use' symbol.

Stage 2: Inspection is carried out and recorded on insert. Competent person signs and dates insert. The insert is placed in holder indicating equipment is ready for use.

Stage 3: Equipment should not be used if insert is removed to instantly display the 'Do Not Use' symbol.

> Fire & Emergency Tag Holders

Fire & emergency inspection tag holders to clearly display latest safety, maintenance and identification information at the point of use.

NAN-GPI WHITE	White Insert
NAN-GPI YELLOW	Yellow Insert

Scaffolding

Legal Regulations

For projects involving working at height, a risk assessment should be completed to determine the appropriate equipment and provide guidance on inspection. This risk assessment should also be provided to contractors before any work commences. Selection of the equipment should take into account a range of factors such as ground conditions, duration and frequency of use and additional risks posed by use, installation and removal of the work equipment.

Scaffolding must be inspected by a competent person:

- ✓ Before it is put into use
- ✓ At seven day intervals until it is dismantled
- ✓ After bad or excessively adverse weather or high winds or another event likely to have effected its strength or stability
- ✓ After any substantial additions or other alterations

In addition to scaffolding structure inspections, scaffolding tie tests should also be carried out, prior to commencing work, by a suitably competent person other than the installer of the original fixings. In addition, a minimum of three anchors must be tested and at least five percent of the overall quantity (1 in 20).

If, when using load test equipment, any of the ties fail to meet the safety margin a full inspection is required and the rate of proofing should be doubled to 1 in 10. Each anchor should also be tested to at least one and a half times the required tensile load with no significant movement of the fixing.

A competent person must carry out general access scaffolding inspections. Written proof of the competence of persons used to inspect scaffolding should always be obtained by the person responsible for the scaffolding and inspection work. A written report must be prepared by the competent person. The report should be written out at the time of the inspection but if this is not possible it must be provided to the responsible person within 24 hours. A copy of the report should be kept on site and a further copy be retained for a period of three months from the completion of the work with the person on whose behalf the inspection was carried out. If a scaffold fails inspection this must be reported by the person carrying out the inspection, to the person responsible for the scaffolding, as soon as possible.

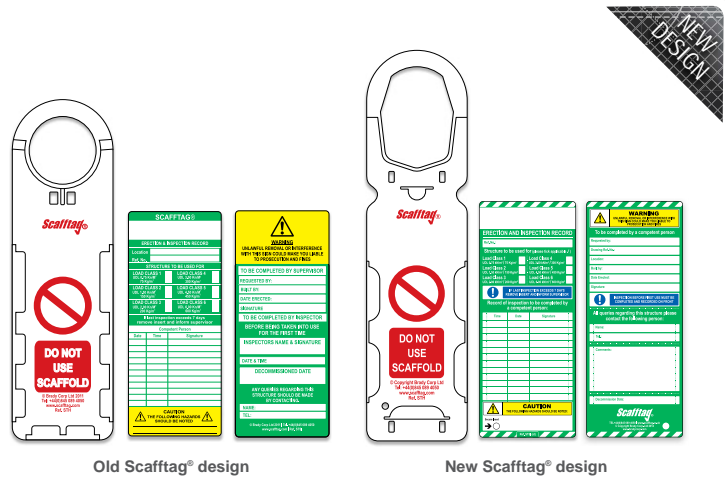

➤ Scaffold Tagging System Design Changes

What's improved?

Over recent months Scafftag® has been asking customers "what do you want from a Scaffold Tagging System". From which you have shared your ideas, and joined in the discussion.

We took these on board and improved the Scafftag®. You told us you want it simpler, so we've made it simpler, you told us you wanted it more durable so we've made it more durable, you wanted more security so we added security.

The New Scafftag® - Re-designed for Scaffolding by scaffolders.

Old Scafftag® design

New Scafftag® design

The Holder

Simple to Use

- ✓ Universal head to fit both tube and clip or system scaffolding
- ✓ Finger lift: Easier to remove the insert
- ✓ Compatible with existing Scafftag® inserts.

More Visible

- ✓ It's Bigger to increase visibility - 358 x 91mm
- ✓ Re-positioned lugs to increase visibility of the insert.

Still got stock of old Scafftag® holders? The new Scafftag® insert is compatible with both the new and old Scafftag® holders.

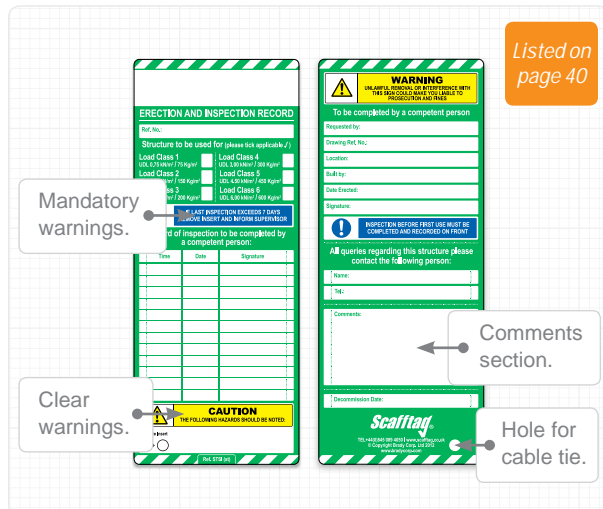

More Durable

- ✓ Made from 'Nylon 6' material making the holder more flexible
- ✓ Temperature range -20°C to +80°C
- ✓ 2 repositioned lugs instead of 3 to increase holder flexibility.

More Secure

- ✓ Additional cable tie attachment option at the bottom of the holder for extra security
- ✓ Secure lug at the top to keep insert in place
- ✓ Hole to cable tie insert to holder.

The Insert

Easier to Read

- ✓ Clear to read
- ✓ Clear warnings
- ✓ Clear mandatory duties to follow
- ✓ Initial inspection record now visible on front of insert rather than the reverse
- ✓ Important information not hindered by lugs on the holder.

More Secure

- ✓ Cable tie hole to secure insert to holder.

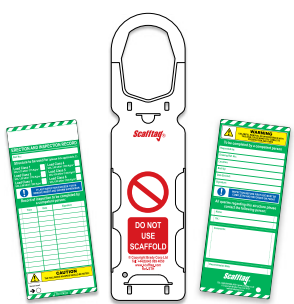

More Space to Write

- ✓ 12 inspection slots rather than 11
- ✓ More room to write information
- ✓ Can record drawing reference number on the insert
- ✓ Large area to include your own comments about the scaffold.

Still got stock of old Scafftag® inserts? The new Scafftag® holder is compatible with both the new and old Scafftag® inserts.

Scaffolding Inspection Tagging Systems

Scaffitag® inspection system is the world leading scaffold status tagging system helping to identify working at height hazards and efficiently managing inspection procedures.

Scaffitag® MK1 (fits System, Tube & Clip Scaffolding)

Code	Description
STSH	Box of 10 holders, 20 STSI standard inserts and 1 permanent marking pens

Scaffitag® MK2 (for System Scaffold)

Code	Description
STSH MK2	Box of 10 holders, 20 STSI 369 ETS standard inserts and 1 permanent marking pens

How it works...

Stage 1: A holder displaying prohibition is attached permanently to the scaffolding structure at all legal access points.

Stage 2: Structure inspected to ascertain if it passes inspection. If it passes inspection, insert is completed and placed into holder. If the scaffold fails inspection, holder is left in prohibition to display "Do not use Scaffold" symbol.

Stage 3: Scaffold structure then re-inspected and if it passes inspection, status insert is updated and placed into holder.

Scaffitag® Multipack & Dispenser Box

Scaffitag® multipack contains 40 holders, 40 inserts, 10 marker pens and a re-usable dispenser box made from durable polypropylene. Dispenser box allows you to store and dispense your Scaffitag® holders and inserts in one place minimising the risk of lost and broken tags.

Scaffitag® Multipack

Code	Description
SCAFF-MULTIPACK	Reusable polypropylene box containing 40 x Scaffitag® holders and 40 x Scaffitag® inserts and 10 x marker pens.

Scaffolding Holders

Scaffolding inspection tag holders designed to operate in conjunction with our Scaffitag® inserts to help identify working at height hazards and efficiently manage inspection procedures.

Scaffitag® Holders (fits System & Tube & Clip Scaffolding)

Code	Description
STH	Box of 10 Scaffitag® holders and 1 permanent marking pen

Scaffitag® MK2 Holders (for System Scaffold)

Code	Description
STH 2	Box of 10 Scaffitag® holders and 1 permanent marking pen

➤ Scaffolding Inserts

Scaffolding inspection tag inserts designed to operate in conjunction with our Scafftag® holders to help identify working at height hazards and efficiently manage inspection procedures.

Standard Scafftag® Inserts

Code Description

STSI (st) Standard Scafftag® MK1 inserts

Standard Scafftag® MK2 Inserts

Code Description

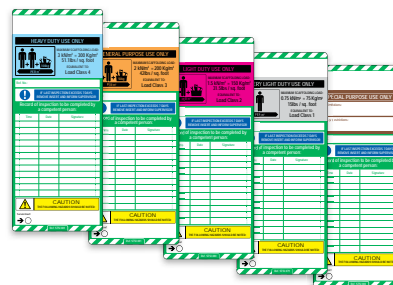

STSI 369 ETS Standard Scafftag® MK2 inserts

Alternative inserts are available which use colour-coding and pictorial images indicating instantly the maximum load recommendations for the scaffold in question. These are particularly useful for sites where varying maximum loadings are in place, and for sites where English is not everybody's first language.

Scafftag® TG:20 Inserts

Code Description

- STSI 482 Heavy Duty - Blue
- STSI 481 General Purpose - Orange
- STSI 480 Light Duty - Magenta
- STSI 479 Very Light Duty - Grey
- STSI 483 Special Purpose - Brown

➤ Scaffolding Prohibition Inserts

Scaffolding inspection tag prohibition inserts designed to operate in conjunction with our Scafftag® holders helping to identify working at height hazards and efficiently manage inspection procedures.

Scaffold Inspectors Prohibition Insert

Code Description

SAFETRAK® FOR SCAFFOLDING PLAN > INSPECT > REPORT

SAFETRAK® SCAFFOLD INSPECTION AND REPORTING

Safetrak® simplifies your scaffolding management processes allowing you to:

- ❖ **COMPLY WITH LEGISLATION** by providing a clear, visible and auditable trail of inspections, endorsements, recommendations and actions.
- ❖ **MANAGE YOUR STRUCTURES** - Commission or decommission of a scaffold structure at a click of a button.
- ❖ **INCREASE ACCURACY** - Handheld computers guide and record inspections using automatic identification technologies such as RFID and barcode.
- ❖ **GENERATE REPORTS** by date for structures that have passed, failed, are due inspection, been commissioned or decommissioned. Access status and history reports for structures from any location.
- ❖ **CONTROL THE COST OF THE PROJECT** by seeing the latest status of the scaffold structures and managing the lifecycle of your jobs.
- ❖ **SUBSTANTIALLY REDUCE ADMINISTRATIVE BURDEN OF MANUAL PAPER REPORTING.**

Request a Safetrak® demo which can be personalised to your specific on-site requirements, and includes:

- ❖ Live system walk through
- ❖ Handheld computer operation
- ❖ Planning work orders
- ❖ Reporting features
- ❖ Relevant examples and case studies of other companies using the system
- ❖ A review of your current processes
- ❖ Identification of where the Safetrak® system can help improve efficiencies and reliability.

To request your demo of Safetrak® contact us on:

Telephone: **0845 089 40 60**

Email: customer.services@scafftag.com

Mobile Towers

Legal Requirements

The Work at Height Regulations 2005 applies to all work at height where there is a risk of a fall liable to cause personal injury. Whether work is being carried out using temporary or fixed access, regular detailed inspections must be carried out and recorded.

If tower scaffolding is selected as suitable equipment, it must be inspected by a competent person. The frequency of inspections are:

- ✓ Before it is put into use
- ✓ After substantial alterations
- ✓ After bad or excessively adverse weather or high winds or another event likely to have effected its strength or stability
- ✓ If the tower remains erected in the same place for more than seven days.

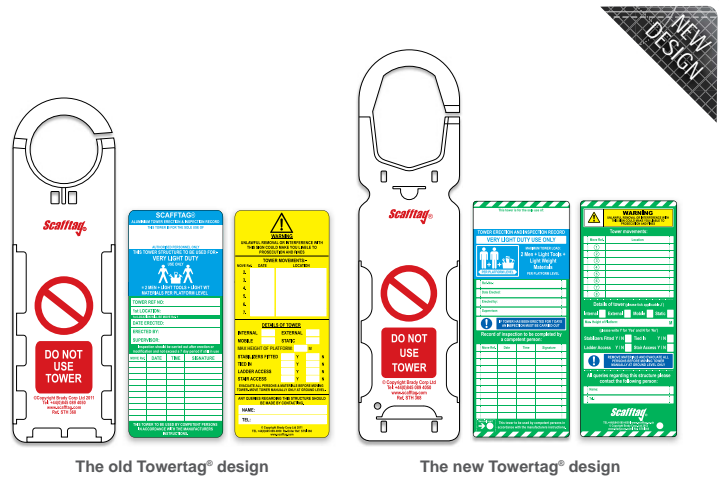

Towertag® enables companies that use mobile towers to display latest inspection, maintenance and identification information at the point of use. The Towertag® system uses a unique holder and insert system to ensure the latest status is instantly visible at the point of use.

Towers are designed to move - The Towertag® insert allows specific information on the movement of each tower scaffold and maximum safe working loads to be clearly displayed at the point of use.

Mobile Tower Tagging System Design Changes

What is a Towertag?

The Towertag® system uses our unique holder and insert system to ensure the latest status is instantly visible at the point of use.
 Towertag® is specifically designed to show locations & move references.

The old Towertag® design

The new Towertag® design

The Holder

Simple to Use

- ✓ Universal head to fit both tube and clip or system scaffolding
- ✓ Finger lift: Easier to remove the insert
- ✓ Compatible with existing Scafftag® inserts.

More Visible

- ✓ It's Bigger to increase visibility - 358 x 91mm
- ✓ Re-positioned lugs to increase visibility of the insert.

Still got stock of old Towertag® holders? The new Towertag® insert is compatible with both the new and old Towertag® holders.

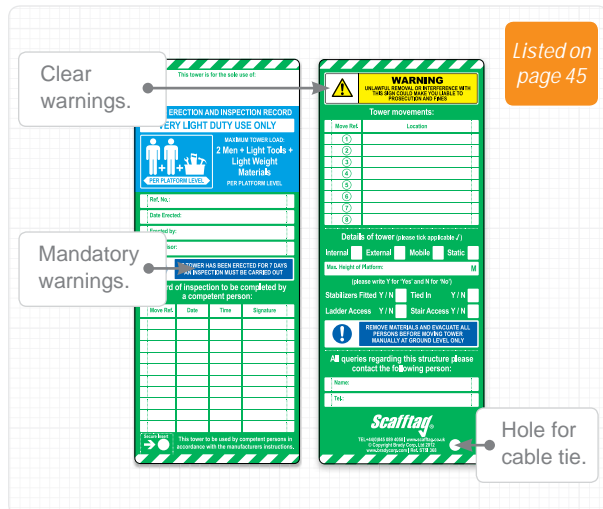

More Durable

- ✓ Made from 'Nylon 6' material making the holder more flexible
- ✓ Temperature range -20°C to +80°C
- ✓ 2 repositioned lugs instead of 3 to increase holder flexibility.

More Secure

- ✓ Additional cable tie attachment option at the bottom of the holder for extra security
- ✓ Secure lug at the top to keep insert in place
- ✓ Hole to cable tie insert to holder.

The Insert

Easier to Read

- ✓ Clear to read and easy to follow format
- ✓ Clear warnings
- ✓ Important information not hindered by lugs on the holder.

More Secure

- ✓ Cable tie hole to secure insert to holder.

More Space to Write

- ✓ More room to write information.

Still got stock of old Towertag® inserts? The new Towertag® holder is compatible with both the new and old Towertag® inserts.

Tower Inspection Systems

Scafftag® offers a complete range of mobile tower inspection systems to allow movements, safe working load and inspection data to be clearly displayed at the point of use.

Towertag®

Code	Description
STSH 368	Box of 10 holders, 20 STSI 368 inserts and 1 permanent marker pens
SLIT A	

Towertag Holders

Scafftag® offers tower inspection tag holders designed to operate alongside our Towertag® inserts to allow movements, safe working load and inspection data to be clearly displayed at the point of use.

Towertag® Holder

Code	Description

The Green Book

Code	Description
G.B.- Tower	Green Book complete for Tower Inspections
G.B.5	Tower Record Cards

> *Good Practice*

Mobile Towers

Formal instruction and training must be provided for all those who erect tower scaffolds and these persons must be deemed competent. Training for erection and use must be provided by a competent person and should be recorded in the employees training record. Towers should rest on firm level ground with the wheels or feet properly supported. Safe access to and from the work platform must be provided. Tower scaffolds must be inspected by a competent person and a record of the inspection be made and kept for three months after dismantling of the scaffold. Inspections are required:

- ✓ Before first use
- ✓ After substantial alterations
- ✓ After any event likely to have affected its stability
- ✓ If the tower remains erected in the same place for more than seven days.

If a tower fails inspection this must be reported by the person carrying out the inspection to the person responsible for the tower, as soon possible. The use of a **Towertag**[®] status tagging system attached to the tower would prohibit further use until the necessary remedial action and re-inspection has been completed.

Where a tower is erected in an area accessible to employees or the public:

- ✓ People should be prevented from walking under or near the tower by means of barriers and signs
- ✓ The minimum amount of equipment and materials should be stored on the scaffold tower
- ✓ All means of access to the tower from ground level, such as ladders, should be removed when scaffolding is left unattended
- ✓ Consideration should be given to whether the area local to the tower should be a designated hard hat area.

The Green Book from Scafftag[®] provides a ready made record management system with carbon copy reports sheets to enable shared records amongst all relevant parties.

Ladders

Legal Requirements

The Work at Height Regulations, consolidating previous UK and European legislation on work at height, came into force in April 2005. They apply to all work at height, both internal and external, where there is a risk of a fall liable to cause personal injury. There are now **no height limits**. These regulations apply to **all work at height, including below ground level and low height**, where there is a potential risk of a fall liable to cause personal injury.

All ladders should be checked daily and prior to any use for damage, faults and wear as well as be inspected by a competent person at periods determined by a risk assessment. They should have a system of identifying when 'safe' to use and when 'unsafe' or not to be used and be given a unique identification reference.

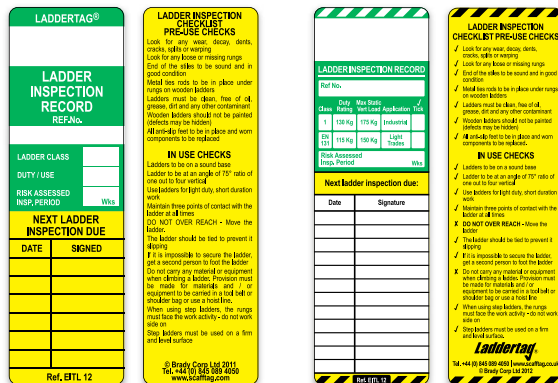

Laddertag® is the original and industry leading status tagging system for ladders.

Laddertag® is robust and highly visible, displaying information relating to a ladders class, inspection period and inspections due as well as a handy, quick-reference ladder inspection checklist. It is for this reason that it has been adopted by thousands of leading ISO9000 companies worldwide.

➤ *Ladder Tagging System Design Changes*

What is a Laddertag?

Laddertag® is robust and highly visible tag, displaying the latest information relating to a ladders class, inspection period and inspections due. On the reverse of the insert is a handy quick-reference ladder inspection checklist.

The old Laddertag® insert

The new Laddertag® insert

The Holder

Specifications

- ✓ **TEMPERATURE TOLERANCE:** -20°C to +130°C
- ✓ **MATERIAL:** Polycarbonate
- ✓ **DIMENSIONS:** 210mm x 55mm
- ✓ **ATTACHMENT OPTIONS:** Cable tie, screw, rivet, magnetic strip, adhesive strip.

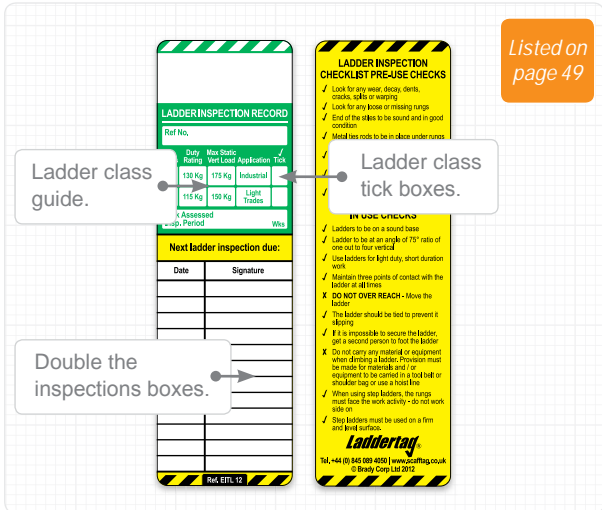

Laddertag® with RFID

The Laddertag® holder is available with an RFID chip attached for use with electronic readers.

For more information please call Scafftag® Customer Services on 0845 089 40 60 or email customer.services@scafftag.com

The Insert

Simple to Use

- ✓ Guide for ladder class, duty rating, max. load and application
- ✓ Tick box to record ladder class and duty / use
- ✓ Double the amount of inspection check boxes – was 6 now 12.

The dimensions of the Laddertag® inserts haven't changed and are compatible with the original Laddertag® holder.

Ladder Complete Kits

Ladder complete kits offer a more convenient and complete solution to companies by providing more than just safety tags. Materials to help understand and comply with ladder regulations and requirements are included in each kit.

Complete Ladder Kit

Code	Description

WS 04	A2 Wall Sheet (Pack of 25) - Ladder Inspection Guide
WS 04 ENCAP	A2 Wall Sheet - Step Ladder Inspection Guide

Ladder and Podium Inspection Guide

Code	Description
PM 6	Ladder and Podium Inspection Guide

How it works...

Stage 1: Attach holder to ladder. Before inspection the prohibition symbol and words "Do not use this ladder" are clearly displayed. Extra strong adhesive strips are available for Laddertag® to enable a quick, flush fit to the ladder without the need for cable ties.

Stage 2: Inspect before use and record on insert. Place insert into holder.

Stage 3: If it fails inspection at any point, remove insert to instantly display "Do not use this ladder".

> Ladder Inspection Records

Collects together all the elements required to manage your ladders onsite in one protective binder. Contains legislative and risk assessment guidance, ladder register, inspection reports and fault notification reports.

The Yellow Book

Code	Description
LIY	The Yellow Book Inspection Record for ladders
LIY 1	Inspection Report (per 100 Minimum)
LIY 2	Notification of Faults Report (per 100 Minimum)
LIY 7	Ladder Register (per 100 Minimum)

> Good Practice

Ladders

Ladders should:

- ✓ Have a system of identifying when 'safe' to use and when 'unsafe' or not to be used
- ✓ Be given a unique identification mark or tag
- ✓ Be recorded in a suitable register
- ✓ Have appropriate records of inspection, repairs or maintenance
- ✓ Be checked daily and prior to any use for damage, faults and wear
- ✓ Inspection periods be determined by ladder type, intended use, work conditions, place of use, ladder age and previous use
- ✓ Be stored in suitable area and conditions.

Employees should be:

- ✓ Trained in ladder use, inspection practices, fault reporting and recording, and transportation and storage
- ✓ Informed of all risk assessments and control measures relating to the equipment, work in hand and work at height issues
- ✓ Recorded in a register detailing training and retraining received relating to ladders, access equipment and any other relevant work at height issues
- ✓ Aware of the hazards associated with fragile roof areas, and be aware that they should never access these without specific safety and control measures being in place.

Reference to the Provision and Use of Work Equipment Regulations 1998, manufacturer or supplier information and the risk assessments for the work to be completed will give guidance relating to required inspection types and periods, in addition to the daily or 'prior to use' inspections.

More comprehensive guidance is available in **The Yellow Book** available from Scafftag®. This indispensable, cost effective system provides step by step guidance on legislation and conducting a risk assessment and a complete set of ready made inspection checklists. Other books are available for specific equipment/issues. For further information, visit www.scafftag.com

Laddertag®, Safetrak® and The Yellow Book provide a complete ladder status management solution to help fulfil the legal requirements above and improve business performance.

Podiums

Legal Requirements

The Work at Height Regulations, consolidating previous UK and European legislation on work at height, came into force in April 2005. They apply to all work at height, both internal and external, where there is a risk of a fall liable to cause personal injury. The regulations bring together all previously existing work at height regulations and state the minimum health and safety requirements for the use of equipment for work at height.

There are now no height limits. These regulations apply to all work at height, including below ground level and low height, where there is a potential risk of a fall liable to cause personal injury.

- ✓ Have a system of identifying when 'safe' to use and when 'unsafe' or not to be used
- ✓ Be given a unique identification mark or tag
- ✓ Have appropriate records of inspection, repairs or maintenance
- ✓ Be checked daily and prior to any use for damage, faults and wear
- ✓ Be inspected by a competent person at periods determined by type, intended use, work conditions, place of use, age and previous use.

Podium Tag enables companies that use podiums to display latest inspection, maintenance and identification information at the point of use. It uses a unique holder and insert system to ensure that the latest status is instantly visible at the point of use.

The specifically designed podium insert includes a quick reference pre-use and in use inspection checklist.

Futureproofed Nanotag's with RFID

What is RFID?

Radio Frequency Identification (RFID) is an automatic identification system which utilizes radio waves to transfer a unique ID from a storage medium to a device configured to read it. RFID does not require physical contact between the reader and the storage medium for data transfer to occur, the signal is also able to pass through different objects dependent on their physical properties i.e. low frequency radio waves are more effective in environments where there is a lot of metal present.

RFID systems are ideal for on-site asset tracking in industrial environments where traditional barcode technology is vulnerable to deterioration and damage from dust, water, oil, grease and other environmental factors.

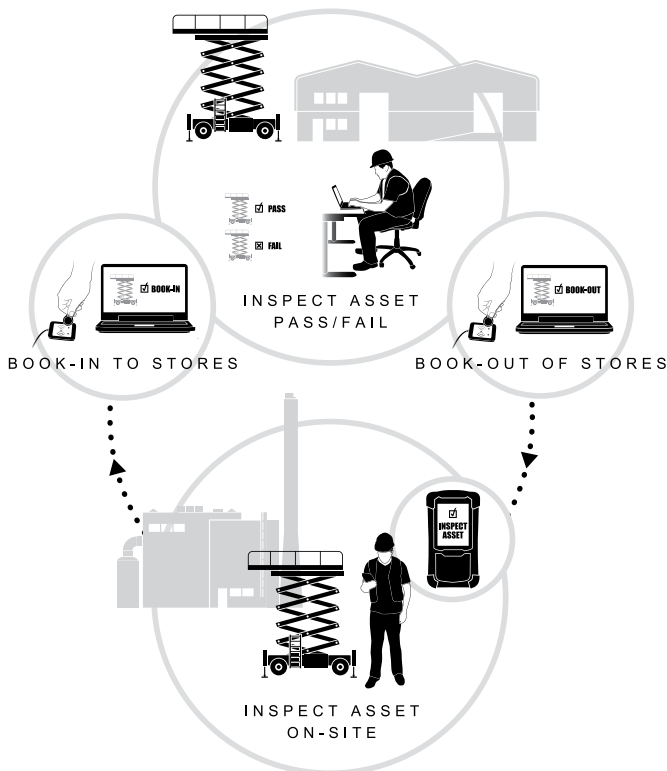

All Nanotag holder's sold by Scafftag® have RFID technology as standard.

The new Nanotag holder is manufactured from durable nylon and has a low frequency RFID chip embedded within as standard making it impervious to dust, oil and water etc. The 20mm low frequency RFID chip operates in the 125Khz range which makes it ideal for use in industrial environments where a lot of metal objects are present. (13.56Mhz version available on request dependent on quantity)

The attachment slots running through the middle of the holders have been enlarged by 1mm to accommodate stainless steel cable ties.

Check in and out with Safetrak®

Managing and controlling who has been assigned each piece of equipment can often provide an administrative headache. With so many assets and users, knowing the location, ownership, class, type and inspection status are just some of the difficulties faced. Utilising RFID tags to identify assets and electronic booking systems to manage them is an efficient way of improving asset tracking.

Using Safetrak® booking software on a computer in the stores, allows you to book in/out equipment and assign to a particular user electronically. The procedure provides the operator with the ability to record the equipment location and can optionally guide the operator through inspection checks before equipment is assigned out to the field.

When the equipment is returned to stores it is scanned to show the user has returned it, and post use checks are recorded

Key features of the Safetrak® booking system are:

- ✓ Includes dates and time stamps for each transaction
- ✓ Increases employee accountability
- ✓ Accurate tracking which eliminates the cost of replacing missing assets.

Harnesses

Legal Requirements

Fall arrest equipment such as harnesses and lanyards must be marked accordingly and safe for such a purpose, e.g. all necessary precautions have been taken to eliminate or reduce any risk. Where appropriate, fall arrest equipment (including accessories) should be thoroughly examined before it is used for the first time and at least six-monthly or at intervals laid down in an examination schedule set by a competent person.

Scafftag® has produced a wide range of solutions for fall protection equipment designed to fit different applications and specific client preferences. All systems use our unique holder and insert system to ensure the latest status is instantly visible at the point of use. A choice of different colour inserts provide the option of additional visual qualification.

Our systems offer the user information such as unique reference number, record of past inspections and any inspection due. Harnesses and lanyards must be tagged individually.

Nanotag™ provides total flexibility with the option for cable tie or split ring attachment. The split ring option is particularly useful for fall protection equipment, facilitating easier and quicker attachment.

Microtag® is a popular system due to its ease of use and familiarity amongst equipment users.

Attached by cable ties in two places – one on the full body harness in the chest region and one on the lanyard. Microtag® does not reduce harness strength.

NAN-PK-GPI PURPLE	Purple Insert
NAN-PK-GPI RED	Red Insert
NAN-PK-GPI WHITE	White Insert
NAN-PK-GPI YELLOW	Yellow Insert

How it works...

Stage 1: Holder is permanently attached to equipment in a prominent position.

Statutory inspection is carried out before use by authorised personnel and recorded on insert. Competent person signs and dates insert. The insert is placed in holder indicating equipment is ready for use.

Stage 2: If equipment fails inspection, insert is removed and handed over to appointed individual. The international prohibition 'Do not use' symbol is instantly displayed.

Keep your tags attached

There are several ways of attaching Scafftag® holders to structures and equipment. The most suitable method for attaching a Nanotag™ to a harness is a split ring which are available as accessories.

See page 90 for more details.

HOW IT WORKS - PLAN. INSPECT. REPORT.

Plan

- ⇒ Periodic Harness inspections are planned on the Safetrak® PC
- ⇒ Planned work orders are downloaded to the operator's handheld device.

Inspect

- ⇒ Each Harness is uniquely identified using an identification tag such as Nanotag™. The Nanotag™ tag displays the current inspection status to all users of the harness with the simple visual insert. (as per standard)
- ⇒ The Safetrak® system works in conjunction with the tag to:
 - Control the use of un-inspected harnesses
 - Manage the assignment of harnesses
 - Manage and record the inspections of each harness
 - Handheld devices guide the operator through the planned work order, providing them with the location of each harness to inspect
 - Once a harness is scanned, the system directs the operator through the inspection with a series of questions and instructions to collect data accurately.

Report

- ⇒ Inspection results are uploaded from the handheld to your desktop
- ⇒ Compile and review timely and accurate reports
- ⇒ Reports can be automatically emailed from the system.

PLAN > INSPECT > REPORT

SAFETRAK® FOR HARNESSSES

Harnesses come in many types and styles but one thing they all have in common is they're susceptibility to damage and wear. Safetrak® for harnesses provides a rigid framework for harness inspection.

Track and control the locations of your harnesses:

- ◆ Plan, perform and report harness inspections
- ◆ Minimise time performing inspections
- ◆ Comply with legislation
- ◆ Produce efficient & accurate reports
- ◆ Eliminate paper records to write, duplicate or file away
- ◆ Help protect yourself against accidents and claims
- ◆ Reduce human error.

Generate the following reports:

- ◆ Harness register
- ◆ Harnesses due for inspection
- ◆ Harness inspection with history.

Confined Spaces

Legal Regulations

The Confined Spaces Regulations 1997 state that any confined space that fails inspection must have a suitable 'warning system' with 'Do Not Enter' displayed and the confined space isolated to ensure that entry cannot take place. Actions to correct the situation and satisfactory retesting of the confined space need to be implemented before the entry procedure can continue.

Entrytag® is a purpose designed status tagging system to control confined space entry in conjunction with a permit to work system. It uses our unique holder and insert system to ensure the minimum requirements for entry (a legal duty) and latest status are instantly visible at the point of entry.

Many Scafftag® customers also adopt the Man in Confined Space Tag in conjunction with Entrytag®. The approved person(s) each have a dedicated Man in Confined Space Tag (containing their details) and attach it to the Entrytag® (using the metal ring available) before entering and remove it when leaving the confined space.

By counting the number of Man in Confined Space Tags at the point of entry, it is instantly clear how many people are working in the confined space.

➤ **Confined Spaces Tagging System Design Changes**

What is an Entrytag?

A complete confined space status tagging system to help prevent accidents and efficiently manage inspection procedures. The Entrytag® system is designed to operate alongside existing permit to work systems and other control procedures employed on site. It uses our unique holder and insert system to ensure the latest status is instantly visible at the point of use.

The old Entrytag® insert

The new Entrytag® insert

The Holder

Specifications

- ✓ **TEMPERATURE TOLERANCE:** -5°C to +65°C
- ✓ **MATERIAL:** ABS
- ✓ **DIMENSIONS:** 285mm x 151mm
- ✓ **ATTACHMENT OPTIONS:** Hung, cable tie, magnetic strip, adhesive strip.

Entrytag® with RFID

The Entrytag® holder is available with an RFID chip attached.

Call **Scafftag® Customer Services** on 0845 089 40 60 or email customer.services@scafftag.com

The Insert

Simple to Use

- ✓ New clear format to record equipment details
- ✓ Illustrated tick boxes for the safety equipment required
- ✓ Record notes / requirements regarding the area of work tagged
- ✓ 42 date and shift inspections rather than 32

The dimensions of the Entrytag® inserts haven't changed and are compatible with the original Entrytag® holder.

Confined Spaces Inspection Tags

Confined spaces status tagging system to help prevent accidents and efficiently manage inspection procedures.

Entrytag®

Code	Description
ETI	Box of 10 Entrytag® Holders, 10 status inserts and 1 permanent pen

Man In...

Code	Description
EITL 577	Man in Confined Space Inserts
EITL 529	Man in Tank Inserts

How it works...

The system should be positioned at the entrance to the confined space, to inform all personnel of the minimum requirements for entry, the type of work being undertaken, and all the other salient details or to prohibit entry entirely.

Entrytag® provides a methodical way to ensure safety is maintained at every stage.

Stage 1: Empty holder is attached to the entrance to the confined space. Before inspection the prohibition symbol and words "Do Not Enter" are clearly displayed.

Stage 2: A competent person is to complete the inspection record and place the insert into holder if area passes inspection.

Stage 3: Inspect at regular intervals as per regulations and record on insert.

Stage 4: If fails inspection, remove insert to display "Do Not Enter"

The standard form of attaching a 'Man In Tank' insert to an Entrytag® holder is by means of a Metal Fixing Ring.

See page 90 for more details.

Chemical Hazard

Legal Regulations

Chemtag® was designed to assist employers meet their regulatory requirements under the Control Of Substance Hazardous to Health (COSHH) Regulations 2002. Employees must be provided with suitable information to prevent or adequately control exposure to hazardous chemicals.

Chemtag® is a complete hazardous substance status tagging system to help prevent accidents and assist in the immediate response should an incident occur. It does not replace the material safety data sheets (MSDS) but allows the user to replicate the critical points and place this at the work location in a tough, durable and easy to understand format.

The Chemtag® contains all the pertinent information relating to the specific risks that the hazardous substances pose such as;

- ✓ Substance type, use and specific risks
- ✓ Details of hazards and precautions for both health and the environment
- ✓ Actions to be taken in the case of any emergencies
- ✓ Notes for medical personnel advising of immediate response
- ✓ Supplier's name and emergency telephone number for immediate advice
- ✓ Details of how to dispose of the item

The Chemtag® insert can accompany the patient to hospital so that appropriate medical treatment can be administered.

> Chemical Hazard Tagging System

Customise your solution

Remember, with Scafftag® you can totally customise your Scafftag® or any other tagging system to reflect your unique issues, branding, work processes and operating environment.

See page 5 for more details.

i How it works...

The system uses our unique holder and insert system to ensure the latest status is instantly visible at the point of use.

Stage 1: Before inspection the prohibition symbol and words “Do not use” are clearly displayed.

Stage 2: Select the appropriate insert and complete the reference or identity number to match the holder. Complete the details identifying hazards and precautions. Write action to be taken in case of emergency in the space provided.

Enter supplier’s name, 24 hour emergency telephone number and details of how to store and dispose of packaging. The bottom section should consist of details of medical warnings associated with the chemical. In the event of an accident the Chemtag® should accompany the patient involved so that the appropriate medical treatment can be administered.

Asbestos

Legal Regulations

The revised Control of Asbestos at Work Regulations 2002 state that if you own, manage, occupy or have responsibilities for a non-domestic building, you now have a legal duty to manage the risks from asbestos, or a duty to co-operate with whoever manages that risk.

Asbestos Containing Materials may be present in any building constructed or refurbished before 1985, when the use of blue and brown asbestos was banned. However, some materials such as asbestos cement continued to be used until 1999, and need to be identified if present in the building.

This duty will require you to find out if there is asbestos in the premises, its amount and condition, assess risks, maintain records and inform employees and contractors.

It is recommended that duty holders display visual warnings at each location identifying the result of the inspection. These can identify them as asbestos present 'asbestos free', or that the material or area has not been confirmed as being either of these and stating that 'asbestos materials may be present'.

Scafftag® has introduced a complete range of asbestos inspection and identification systems to ensure latest status is instantly visible at all areas at risk of having Asbestos Containing Materials (ACMs) present. The tag informs workers whether the area they would be entering possesses a danger. And they are an excellent visual indicator identifying whether the location is Asbestos free or if asbestos containing materials are present. The unique holder and insert system can be securely attached using cable ties or adhesive.

▶ Asbestos Tagging Systems (ASB)

Scafftag offers asbestos inspection tagging systems. Use Asbestos Tags to communicate the latest statuses and risks of having Asbestos Containing Materials (ACMs).

Asbestos Tag (Asbestos Free Area)

Code	Description
WS 05a	A2 Wall Sheet (Pack of 25) - Guide to control of Asbestos at work regulations

> Good Practice**Good Practice for Management****Confined Space inspection and record keeping**

All confined space entries must be adequately planned so that they can be individually risk assessed, checked for hazards and made as safe as possible. All personnel carrying out work in confined spaces should be trained in the hazards associated with this work. The periods for repeating entry control requirements

and reissue/renewal of the permits involved will be determined by:

- ✓ Changes of shifts or working groups
- ✓ Changes in work activities
- ✓ Changes in conditions inside or outside the confined space.

Action	Requirements
Risk Assessment	Define the work to take place and the number of entrants. Assess all hazards, chemical, gas, mechanical, hydraulic, electrical etc. Define and implement training for all persons involved in the work (entrants, atmosphere testers, standbys, permit issuers etc). Ensure that all persons are aware of all hazards and risks associated with the tasks to be carried out.
Emergency Plan	Define, record and implement an emergency plan to protect entrants in the event of an accident within, or incident likely to affect, the confined space or the work procedure.
Tagging/Signs	Place a 'warning system' such as Entrytag® at the point of access into the confined space and erect signs near the confined space to inform people there is an entry in progress. Ensure all necessary access restrictions are in place to maintain the required control of the area.
Control System	Ensure that the required confined space entry, safe work and hot work permits required for the tasks to be completed are in place to protect all personnel involved in carrying out the work, and any emergency actions that may be required.
Sampling	Ensure that all sampling of the work location is completed and recorded. The atmosphere and any other contents of the confined space must be sampled as part of the control system. Ensure that persons entering the space wear appropriate personal monitors (oxygen etc) and the air in the confined space is monitored from outside of the space by a safety standby observer.
Personal Protective Equipment (PPE)	Employers must ensure that any PPE provided to his employees is suitable for the purpose for which it is intended, is maintained (including replaced or cleaned as appropriate) in an efficient state, is in efficient working order and in good repair. Respiratory Protective Equipment (RPE), should comply with the requirements of the Personal Protective Equipment Regulations 1992 , displaying a 'CE mark', or be of a type or standard approved by HSE, as appropriate. Where Respiratory Protective Equipment (RPE) is provided or used in connection with a confined space entry, (or for emergency or rescue), it should be suitable for the purpose for which it is intended, i.e. correctly selected and matched to both the job and the wearer. RPE would not normally be suitable unless it is breathing apparatus, as for most cases breathing apparatus would provide the standard of protection required for entry into a confined space.

Excavations

Legal Regulations

The Health and Safety Executive guidance for excavation work HSG (47), applies whether excavation work is on the highway or otherwise.

Some of the main principles to adopt before excavation work commences are:

- ✓ A suitable and sufficient assessment of the risks involved must be undertaken and safe systems of work made clear to those involved in the works
- ✓ The plans need to be interpreted by a competent person

Excavation Tag is a specifically designed durable tagging system to help manage the hazards found within excavations. It uses our unique holder and insert system to provide up to date information on potential hazards, actions to be taken and daily and weekly inspections records.

The Excavation Tag provides a clear and thorough risk assessment and recorded check of the excavation work and hazards. Apart from daily inspections which are recorded on the tag, provision must be made to record a thorough weekly examination of the excavation area and any hazards present in the area.

The location, description and hazards are all clearly displayed on the Excavation Tag along with the name and contact details of the competent person, the date the service report was done and details of any health and safety actions if the work cannot be carried out. After the initial inspection is recorded on the front of the insert, the daily / weekly checks need to be signed and dated at the back of the insert.

Excavation Tagging System Design Changes

What is an Excavation Tag?

A specifically designed durable status tagging system to help prevent against the dangers of excavations. Excavation Tag uses our unique holder and insert system to provide up to date information on potential hazards, actions to be taken and daily and weekly inspections records.

SAFETRAK® - INSPECTION AND REPORTING

Safetrak® simplifies your inspections and reporting processes allowing you to:

- **MANAGE SAFETY** inspections, maintenance work, asset identification and location
- **COMPLY WITH LEGISLATION** by providing a clear, visible and audit able trail of inspections, endorsements, recommendations and actions
- **GENERATE REPORTS** for equipment that has passed, failed, due inspection, been commissioned and decommissioned by date
- **TRACK AND CONTROL** the inspection, maintenance and service procedures and identify assets and location
- **INCREASE ACCURACY:** Use mobile computers to guide and record inspections using automatic identification technologies such as RFID and barcode to ensure the correct checks for each specific type of equipment are carried out every time
- **ELIMINATE PAPER REPORTING** and substantially reduce administration
- **SHARE UP-TO-DATE INFORMATION:** Plan with your personnel, both out in the field and back in the office.

Request a Safetrak® demo which can be personalised to your specific on-site requirements, and includes:

- Live system walk through
- Handheld computer operation
- Planning work orders
- Reporting features
- Relevant examples and case studies of other companies using the system
- A review of your current processes
- Identification of where the Safetrak® system can help improve efficiencies and reliability.

Process & Pipelines

Legal Regulations

The Provision and Use of Work Equipment Regulations 1998 (PUWER) states:

'Regulation 19 - Isolation from sources of energy

- (1) Every employer shall ensure that where appropriate work equipment is provided with suitable means to isolate it from all its sources of energy.
- (2) Without prejudice to the generality of paragraph (1), the means mentioned in that paragraph shall not be suitable unless they are clearly identifiable and readily accessible.
- (3) Every employer shall take appropriate measures to ensure that re-connection of any energy source to work equipment does not expose any person using the work equipment to any risk to his health or safety.'

The main aim of this regulation is to allow equipment to be **made safe** under particular circumstances, such as when maintenance is to be carried out, when an unsafe condition develops (failure of a component, overheating, or pressure buildup), or where a temporarily adverse environment would render the equipment unsafe, for example electrical equipment in wet conditions or in a flammable or explosive atmosphere.

If work on isolated equipment is being done by more than one person, it may be necessary to provide a locking device with multiple locks and keys. Each will have their own lock or key, and all locks have to be taken off before the isolating device can be removed. Keys should not be passed to anyone other than the nominated personnel and should not be interchanged between nominated people.

Request our **Lockout Tagout** and **Pipemarking** catalogues:

T: 0845 089 40 60

Isolation Tags

Isolation Tag is a complete status tagging system to help control mechanical and electrical isolation procedures and prevent inadvertent energising of the system to reduce potential for accidents. The system is normally two part perforated and consists of two identical sections which are completed by the person in charge.

Isolation Tag

Code	Description
ISO 08	Standard Isolation inserts

How it works... Isolation Tag

One section is attached to the asset and the other is held by the permitting authority, thereby clearly identifying the current status of the operation to all individuals. By using the perforation on the tag, each section can easily be removed without the need for either scissors or knives which may require additional permits.

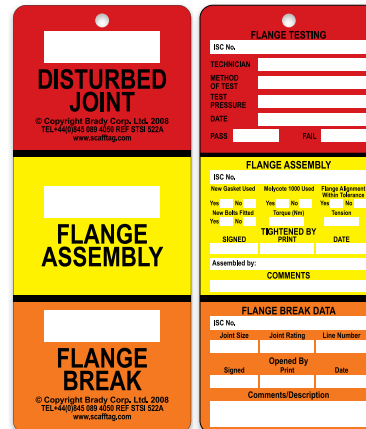

Isolation Tags

Flange Tag is a complete status tagging system to help control inspection, modification and maintenance throughout the flange break / inspection process. The system is normally three or four part perforated and assists the user to clearly identify the various stages of the operation from the initial break to the re-energisation of the system. Flange Tags can be supplied with unique ID numbers for enhanced control and tracking.

Flange Tag

Code	Description
STSI 422 DS	3 Part Joint Inserts

Flange Tag

Code	Description
STSI 522 A	3 Part Flange Inserts

How it works... Flange Tag The standard Flange Tag uses a 3 stage system:

1. 'Flange Break Data': Tag attached to flange to identify defined work. Details completed and perforated section removed and placed in the Flange Register.

2. 'Flange Assembly': Flange is reassembled and details are completed as appropriate. The perforated section is removed and placed in the Flange Register along with the 1st stage section.

3. 'Flange Testing':

Fails Test – Corrective maintenance carried out until passed test.

Passes Test – Details completed and perforated section removed and placed in the Flange Register along with the other two sections. At this stage, it is visibly identifiable to all that the flange is fit for use.

Valves

> Valve Inspection Tag System

Valvetag® inspection system designed to identify the status of valves and help control hazardous energy during maintenance and servicing.

Valvetag®

Code	Description
EITH/L52	Box of 10 Valvetag® Holders, 10 status inserts and 1 permanent pen

> Valve Tag Holders

Valve inspection tag holders designed to operate in conjunction with our Valvetag® inserts to identify the status of valves and help control hazardous energy during maintenance and servicing.

Safetrak®: Plan. Inspect. Report.

Plan. Inspect. Report.

Making Latest Status Visible

Safetrak® is the revolutionary electronic system that brings Equipment Status Management to your desktop.

Keep on top of all your different:

- ✓ Safety inspections
- ✓ Maintenance work
- ✓ Asset identification and location

Safetrak® is an electronic management tool that shares information on equipment and controls workflow for onsite employees and managers.

Safetrak® uses three components:

Electronically chipped Scaffitag tagging systems

Rugged tags use either, long life RFID (Radio Frequency Identification) or barcode technology.

Handheld computers

Built to withstand industrial working conditions, including intrinsically safe models.

Specially designed software

Readymade modules are available for most equipment applications plus it can be customised to meet your own requirements and work practices.

Safetrak® allows efficient monitoring and evaluation of information in a simple and organised process. It combines visual identification with the speed and information benefits of computerised recording. This facilitates standardisation of best working practice and company wide reporting for records and audits.

"With the use of Safetrak we have seen reductions in project operating costs of up to 20%"

Some of our valued clients:

Plan

Work is planned for assets on the Safetrak® PC either automatically or manually. Work orders are then downloaded to operator's handheld computers.

01

Execute

Each asset is uniquely identified with a tag. Handheld computer guides the operator through the work order, providing the location of each asset to perform a task on. Once a specific asset is scanned, the system directs the operator through a series of questions and instructions collecting data accurately.

02

Record, report & review

Upload records from handhelds. Compile and review timely and accurate reports from the Safetrak® system.

03

Return on Investment

Investing in Safetrak® not only makes equipment management tasks simpler, it also makes sound financial sense.

Eliminate Wasted Time

A great deal of time and money is often wasted on site on things like producing paperwork and field personnel trying to locate assets.

Safetrak® provides you and your team with an integrated system to

- ✓ Quickly locate assets
- ✓ Guide inspections / maintenance checks
- ✓ Plan efficient work orders
- ✓ Report effortlessly

Eliminate Accidents and Downtime

Safetrak® helps ensure the correct checks for each specific type of equipment are carried out every time, on time.

This helps to avoid site incidents that have serious cost implications.

When all of the costs of bad decisions are added up, it is easy to see how a system like Safetrak justifies itself financially.

Site Incidents Cost Summary

Safetrak can help you avoid all of the following costs:

Users: Accidents and Injury	Equipment
✗ Lost man hours	✗ Downtime
✗ Compensation costs	✗ Equipment damage and loss
✗ Insurance costs	
✗ Investigation and reporting	
✗ Employee moral	

Safetrak® Software

With Safetrak®, once you have the core system in place you can extend it to manage other types of equipment by moving up to the Standard, professional or enterprise version.

	EXPRESS	STANDARD	PROFESSIONAL	ENTERPRISE	Notes
Order Code	See page 110	SAF-SW-STD	SAF-SW-PRO	SAF-SW-ENT	-
Modules included	1	1	3	5	A module is a type of equipment e.g. ladder, lift gear, scaffold.
Max number of modules	1	3	10	Unlimited	Each version except enterprise is limited to the number of modules you can add to it. Modules for all except Express are available to purchase separately.
Custom modules	-	✓	✓	✓	Modules are either standard off the shelf or written to customer request, express is limited to only standard modules with no customisation.
Number of handhelds	1	2	5	Unlimited	To perform inspections or other procedures a handheld computer is required, each level of software has a limit on the number that can be connected.
Can be networked	-	-	✓	✓	In all the networkable versions you can have the database installed on a server giving a number of clients access to the software (not applicable in the hosted version).
Multiple database	-	-	-	✓	In large multi site situations the Enterprise version can be split into different databases for speed and security of data.
Web portal	-	-	✓	✓	Add a web portal customised to your business needs to provide reports and create requests.
PC users on hosted version	1 User	2 Users / Add 3 users	5 Users / Add 10 users	10 Users / Unlimited users	The standard amount of users included on the hosted version / Additional user licences that you can expand the system by.
Support level	Email only	Email/Phone	Email/Phone	Email/Phone	

For a basic standalone system we would recommend the following minimums for the hardware:

- ✓ Processor (CPU) 2Ghz
- ✓ RAM 2GB (it will work with 1GB but slower)
- ✓ Hard disk Space - 1Gb free
- ✓ Screen - Minimum resolution 1020 x 798
- ✓ ISS must be installed on the server or client PC if standalone.

Compatible operating systems:

- ✓ Vista Business
- ✓ Windows 7 Ultimate
- ✓ Windows 7 Business / Professional
- ✓ Windows XP Professional
- ✓ Windows server 2003 or 2008
- ✗ Cannot be installed on Windows Home/Starter

➤ Safetrak Express Software

Enhance your vision of ladder inspections with Safetrak® Express

Safetrak Express for Ladders is the simple off the shelf electronic equipment inspection system which allows you to track and control the location of all your ladder assets and minimise the time spent planning, performing and reporting your ladder inspections.

Safetrak Express (for Ladders)

Code	Description
SAF-SW-EXP-LAD	1 x Safetrak® software 1 x Ladder inspections module 1 x Handheld inspection device - PDA with RFID reader 2 x boxes of RFID Enabled Laddertag™

➤ Safetrak Express Application Modules

Safetrak Application Modules

Code	Description
SAF-MOD-ASB	Asbestos register customisation module
SAF-MOD-ELEC	Electrical customisation module
SAF-MOD-FDR	Fire door customisation module
SAF-MOD-FEX	Fire extinguisher customisation module
SAF-MOD-FLT	Forklift customisation module
SAF-MOD-LDR	Ladder customisation module
SAF-MOD-LTG	General lifting equipment customisation module
SAF-MOD-RISK	Risk assessment customisation module
SAF-MOD-SCAF	Scaffold customisation module
SAF-MOD-MEWP	MEWP customisation module
SAF-MOD-RACK	Racking and shelving customisation module
SAF-MOD-TWR	Mobile tower customisation module
SAF-MOD-EXC	Excavation customisation module
SAF-MOD-CLN	Cleaning standards customisation module
SAF-MOD-HRN	Harness customisation module
SAF-MOD-GAA	General asset audit customisation module
SAF-MOD-BOOK	Booking in and out system add on, can be used with any of the above equipment modules (requires deskreader and user tags)
SAF-MOD-PORTAL	Webportal for Safetrak Professional and Enterprise*
SAF-MOD-CUSTOM	Custom module to client request*

* Built in conjunction with the clients requirements and priced according to complexity

Futureproofed Nanotag's with RFID

What is RFID?

Radio Frequency Identification (RFID) is an automatic identification system which utilizes radio waves to transfer a unique ID from a storage medium to a device configured to read it. RFID does not require physical contact between the reader and the storage medium for data transfer to occur, the signal is also able to pass through different objects dependent on their physical properties i.e. low frequency radio waves are more effective in environments where there is a lot of metal present.

RFID systems are ideal for on-site asset tracking in industrial environments where traditional barcode technology is vulnerable to deterioration and damage from dust, water, oil, grease and other environmental factors.

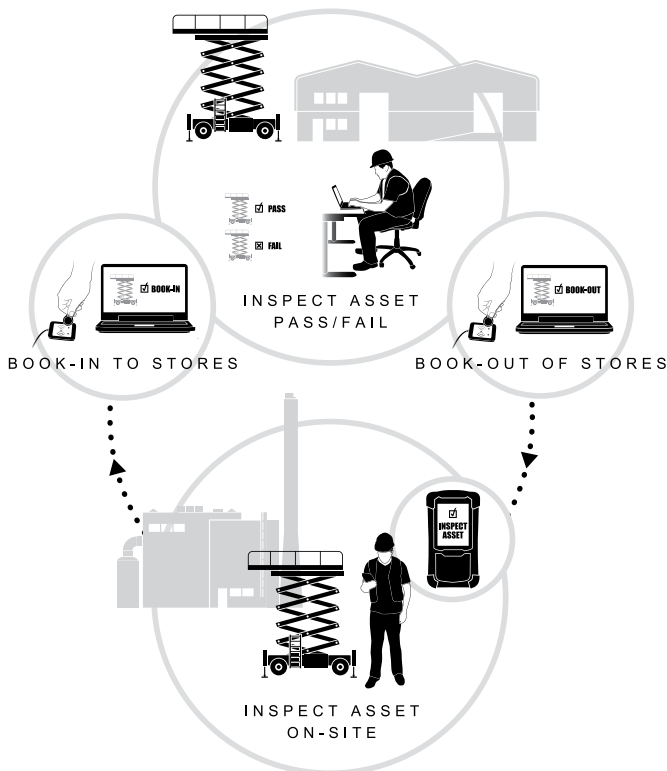

All Nanotag holder's sold by Scafftag® have RFID technology as standard.

The new Nanotag holder is manufactured from durable nylon and has a low frequency RFID chip embedded within as **standard** making it impervious to dust, oil and water etc. The 20mm low frequency RFID chip operates in the 125Khz range which makes it ideal for use in industrial environments where a lot of metal objects are present. (13.56Mhz version available on request dependent on quantity)

The attachment slots running through the middle of the holders have been enlarged by 1mm to accommodate stainless steel cable ties.

Check in and out with Safetrak®

Managing and controlling who has been assigned each piece of equipment can often provide an administrative headache. With so many assets and users, knowing the location, ownership, class, type and inspection status are just some of the difficulties faced. Utilising RFID tags to identify assets and electronic booking systems to manage them is an efficient way of improving asset tracking.

Using Safetrak® booking software on a computer in the stores, allows you to book in/out equipment and assign to a particular user electronically. The procedure provides the operator with the ability to record the equipment location and can optionally guide the operator through inspection checks before equipment is assigned out to the field.

When the equipment is returned to stores it is scanned to show the user has returned it, and post use checks are recorded

Key features of the Safetrak® booking system are:

- ✓ Includes dates and time stamps for each transaction
- ✓ Increases employee accountability
- ✓ Accurate tracking which eliminates the cost of replacing missing assets.

Marker Pens

The Edding® 141 F is supplied as standard with Scafftag® tagging systems where 'permanent marker' is stated.

- Permanent marker for use on virtually any material, good for writing on glass, plastics and the edge of slides and the like
- Smudge-proof, water-resistant ink
- Fine bullet tip, stroke width @ 0.6mm
- Ink can be erased with alcohol.

141 F Permanent Marker Pen

Code	Description
STSM	Black 10 x Edding 141 F permanent marking pens

The Scafftag® pen clip attaches to the side of the holder to ensure you always have a suitable pen at hand while completing your inspection and maintenance checks.

The pen clip holder is unobtrusive (13mm width) and suitable for attachment to any Scafftag® holders.

The Edding® 141 F pen supplied as standard with Scafftag® tagging system is the correct diameter for this clip.

- This marker has been dermatologically tested and is safe for use on skin
- It contains permanent, low odour ink and is ideal for use in hospitals and doctors surgeries
- Recommended for use in radiology and radiotherapy environments.

Why implement a Lockout / Tagout program?

Reduced Accident Rates and Injury Costs

EU Figures show that 10 to 15% of all fatal accidents at work and 15 to 20% of all accidents are connected with maintenance. Common injuries include fractures, lacerations, amputations, burns and shocks. Due to the serious nature of many LO/TO accidents, injury-related costs can be exorbitant.

Less Downtime, Higher Productivity

A well-organised LO/TO program that includes clearly labelled energy sources, easy-to-follow procedures, and readily accessible lockout tools can greatly speed up maintenance and servicing activities. Workers can avoid time-consuming tasks such as tracing pipelines and electrical circuits in order to verify the appropriate energy control points. As a result, maintenance work is completed more efficiently, downtime is reduced and machinery is kept running at peak performance levels.

Reduced Indirect Costs

Accidents can have a significant impact on work scheduling and productivity at the affected job site. The unexpected start up of equipment can also cause extensive damage to the machinery itself, adding the expense of equipment repairs and replacement to the total cost involved.

Best Safety Practice

Lockout / Tagout has become globally recognised as Best Safety Practice for many industries.

Meet the Regulation Standards

The Health and Safety (Signs & Signals) Regulations 1996 Part 3 require all employers to identify all pipes within their facility. Several norms exist across Europe, which indicate how pipes should be identified. Pipes transporting dangerous and hazardous substances must be identified with the relevant danger symbol and the name of the hazardous or dangerous substance.

Safety First

Unmarked pipes are a danger to both life and property. Accidents, injuries and damage to equipment can be caused by people not knowing what individual pipes contain.

The Economical Choice

By correctly identifying pipes, errors can be prevented. Accidents caused by negligence lead to both physical and psychological grief and often cost companies large amounts of money.

Save Time

The correct identification of pipes ensures a better insight into a building's structure – and gaining such an insight with speed and clarity is of vital importance for emergency services, outside maintenance contractors as well as new employees and temporary staff. It will also make maintenance work easier and prevent time-consuming searches. If an accident does occur, correct identification can help save valuable time - and even lives.

Scafftag® offers you:

A Wide Range

Over 300 different standard substances that are available in several sizes and layouts. This standard range covers the most frequently used industrial substances. In the unlikely event that your particular needs are not fulfilled in this range, don't worry: Scafftag® will customise markers to your personal requirements.

Quality

The self-adhesive markers are made from polyester film, laminated with a crystal clear polyester over-laminate. This over-laminate has a very high resistance to chemicals, ultraviolet rays and extreme weather conditions and ensures your pipe marker will stay in place and readable for 5 to 8 years.
